## ANNEXURE I

### Specifications for RT-PCR kits :

- Should be in a kit format.
- Should be CE IVD/CDSO certified with documentary evidence
- Bids must include external quality assurance results for performance evaluation
- Should have RNase P gene primer probe mix in the kit that runs by default with every test – RNase P should not be confused with any other control running outside the sample PCR tube

Kit Should be able to detect following targets on Real Time PCR:

Adeno Virus

Kit should be multiple tube format so that each target can be detected and differentiated easily.

- Should have positive control in the kit and not to be purchased separately
- Kits must be compatible with ABI 7500Fast Dx, CFX96, which documentary evidence must be provided from the manufacturer along with programming guidebooks / manuals from the manufacturer, without needing any additional software to be purchased.
- The kits should have extended stability of at least 12 months from the date of manufacture and documentary evidence from the manufacturer
- Should be validated from respiratory samples by the manufacturer
- Should detect and differentiate between the pathogens by targeting the specific gene
- Must have a lower limit of detection less than 50 RNA copies per reaction
- Should use common channels FAM, ROX, HEX, JOE or VIC for detection and not specific machine dependent channels for highest sensitivity
- **The L1 bidder must provide advance sample of the kit (demo kit) for buyer's approval before commencement of procurement**
- Spin column based manual DNA extraction kit must be supplied along with the kit.
